

Portfolio Dashboard

Setup Guide

October 2026

Portfolio Dashboard tracks your stocks and ETFs, shows live prices, ratios and analyst ratings, lists earnings dates and this week's economic events, and explains why the market moved. It runs in your web browser and can be added to your home screen or desktop like an app. There's nothing to download from an app store.

What you'll do

Step	What	Time
1 Read the warnings	Section 1. Please read these before you rely on the app.	2 min
2 Put it online	Section 2. Upload the files to GitHub and deploy on Vercel to get your own web address.	10 min
3 Open & install it	Section 3. Open your address and add it to your home screen or desktop.	1 min
4 Add your trades	Section 4. Record your buys and sells.	5 min

1 Important warnings

No guarantee of accuracy

Prices and company data come from Yahoo Finance (delayed up to 15 minutes) through an unofficial library, and the economic calendar comes from ForexFactory's public weekly feed. Either source can change, break or contain mistakes. The "Why it moved" recap shows what happened at the same time as a market move; that's strong evidence, not proof of cause.

Nothing in the app is financial advice. Check important numbers with your broker before you act on them.

Your trades stay on your device, and devices don't sync

Trades, your watchlist and settings are saved only in the browser where you entered them. There's no account and no cloud. Clearing browser data, removing the app, or switching devices loses them.

Use **Settings (gear icon) → Download backup** regularly. To use the dashboard on another device, open it there and choose **Restore backup**.

2 Put it online (one time, free)

The live data needs a small server, so the dashboard is hosted on **Vercel**, the same free service your friend's Semester Dashboard uses. You'll end up with your own address like `portfolio-dashboard-yourname.vercel.app`.

- 1 **Unzip** `portfolio-dashboard.zip` on a computer. You'll get a folder called `portfolio-dashboard`.
- 2 **Make a GitHub account** at `github.com` (free) and sign in.
- 3 Click + (top right) → **New repository**. Name it `portfolio-dashboard` and click **Create repository**.
- 4 On the next page click **uploading an existing file**. Open the unzipped folder, select **everything inside it** (including the `api` and `js` folders) and drag it into the browser. Wait for the uploads to finish, then click **Commit changes**.
- 5 Go to `vercel.com` → **Sign Up** → **Continue with GitHub**.
- 6 Click **Add New...** → **Project**, find `portfolio-dashboard` and click **Import**. Leave every setting as it is and click **Deploy**.
- 7 After about a minute you'll see **Congratulations**. Click the preview or **Continue to Dashboard** to see your address under **Domains**. Save it somewhere handy.

Check it worked: open your address. If an orange **Demo data** banner shows, wait a minute and refresh. If it's still there, see Troubleshooting.

3 Open the dashboard

Any time you want the dashboard, open your Vercel address in a browser. To make it open like an app with its own icon, install it once on each device:

iPhone and iPad

Use Safari.

- 1 Open Safari and go to your Vercel address.
- 2 Tap the **Share** button (on newer iPhones, tap **•••** first, then **Share**).
- 3 Tap **View More** if needed, then **Add to Home Screen**.
- 4 Tap **Add**. The Portfolio icon appears on your home screen.

Android phone or tablet

Use Google Chrome.

- 1 Open Chrome and go to your Vercel address.
- 2 Tap the  menu in the top-right corner.
- 3 Tap **Install app** or **Add to home screen**, then **Install**.

Windows, Mac or Chromebook

Use Google Chrome or Microsoft Edge.

- 1 Go to your Vercel address. Click the **download-arrow icon** in the dashboard's top bar (it appears when your browser allows installing), then **Install**.
- 2 Or click the browser's  menu → **Install Portfolio Dashboard...** (in Chrome it may be under **Cast, save, and share**).
- 3 The dashboard opens in its own window. Find it later in your Start menu, Launchpad or app launcher.

Using Safari on a Mac? Choose **File** → **Add to Dock**.

Not sure which steps apply? Open the dashboard and tap the **gear icon** → **Open it like an app**. It shows the steps for the device you're on.

Light and dark mode

Tap the **moon / sun icon** in the top bar (or press **T** on a keyboard) to switch between light and dark. In **Settings** → **Appearance** you can pick **Match device**, **Light** or **Dark**. Your choice is remembered on that device.

4 Add your trades

- 1 Tap **Add trade** on the Overview or Portfolio tab.
- 2 Choose **Buy** or **Sell** and type the symbol. Canadian listings end in **.T0** (e.g. **VFV.T0**, **RY.T0**); US ones don't (**AAPL**). The app fills in the currency and latest price. **Use current price** copies it in.
- 3 Enter the date, number of shares, price per share and any commission, then tap **Save trade**.

Costs use the average-cost method (adjusted cost base). Totals show in Canadian dollars; switch to US dollars in Settings. To explore first, tap **Load sample portfolio**, then delete those trades under **Portfolio** → **Trades**.

5 What's in each tab

Tab	What it shows
Overview	Portfolio value, today's and all-time return, allocation donut, market pulse (S&P 500, TSX, Nasdaq, VIX, 10-year yield, oil, gold, USD/CAD), your biggest movers, key events, upcoming earnings, headlines.
Portfolio	Holdings with gain/loss, performance vs. the S&P 500, TSX or Nasdaq, your sector mix vs. a benchmark (Cyclical / Defensive / Sensitive), and trade history.
Research	Any stock or ETF: price chart, about 25 ratios (P/E, forward P/E, PEG, P/B, EV/EBITDA, margins, ROE, debt/equity, growth, dividends) with plain-English explanations, analyst consensus and price targets, rating changes, earnings history, news.
Earnings	Upcoming earnings dates and estimates for your holdings and watchlist.
News	This week's economic calendar from ForexFactory (filter by impact and currency; tap an event to see what it means) and market headlines.
Why it moved	A written recap for the last session, this week or the past month: indices, sectors, rates, oil, the dollar, the VIX, which scheduled events fell on the down days, and the main news themes.

6 Good to know

- Prices refresh every minute while the dashboard is open; news and the calendar every 15 minutes. Tap the refresh icon (or press **R**) any time.
- The dashboard needs an internet connection; it doesn't work offline.
- The ForexFactory feed includes the forecast and previous value but not the actual result.
- Earnings dates can move until the company confirms them.
- To change the app later, edit or re-upload a file on GitHub. Vercel updates your site automatically within a minute.

7 Troubleshooting

Problem	What to do
"Demo data" banner after deploying	In GitHub, check that <code>api</code> , <code>js</code> , <code>index.html</code> and <code>package.json</code> sit at the top of the repository, not inside another folder. Fix that, then in Vercel open the project → Deployments → ... → Redeploy .
"Couldn't load prices"	Yahoo Finance sometimes blocks requests for a few minutes. Wait and refresh. If it lasts for days, redeploy in Vercel so it installs the newest version of the data library.
A ticker isn't found	Use Yahoo's format: <code>.T0</code> for TSX, <code>.V</code> for TSX Venture, <code>.NE</code> for Cboe Canada.
No install option	Use Safari on iPhone/iPad, Chrome on Android, and Chrome or Edge on computers, and make sure you're on your Vercel address, not a file on your computer.
Calendar is empty	ForexFactory limits how often its feed can be read. Try again in 30 minutes.
My trades disappeared	They're stored per browser. Restore your latest backup from Settings → Restore backup .
